

Personal Expense Tracker Android Application

Internship Project Documentation

Intern Information

Intern ID: CITS3045

Name: Harsh Dhakad

Organization: CODTECH IT SOLUTIONS

Domain: Android Development

Project: Personal Expense Tracker Android Application

Introduction

This Android application helps users manage daily income, expenses, monthly budgets, and financial records using Java and SQLite. It provides a modern interface with budget tracking, statistics, PDF export, and transaction management.

Objective

To develop a modern Android expense tracking application demonstrating SQLite database operations, RecyclerView, Material Design UI, budget management, graphical statistics, and PDF report generation.

Features

- Add Income
- Add Expense
- Edit Transaction
- Delete Transaction
- Transaction History
- Search Transactions
- Monthly Budget
- Budget Progress & Status
- Category-wise Pie Chart Statistics
- PDF Report Export
- Splash Screen

Technologies Used

Java, XML, Android Studio, SQLite Database, RecyclerView, ViewBinding, Material Design Components, MPAndroidChart, FileProvider, Git, GitHub.

System Workflow

Application Launch → Splash Screen → Dashboard → Add Income/Expense → Save in SQLite → Update Balance → Manage Budget → View History → View Statistics → Export PDF Report.

Database Used

SQLite Database (Transactions Table, Budget Table).

Future Enhancements

Firebase Backup, Google Sign-In, Cloud Sync, Notifications, Dark Mode, Multi-Currency Support, Monthly Reports, AI Spending Insights.

Conclusion

The Personal Expense Tracker Android Application demonstrates Android development using Java with SQLite Database. The project is suitable for internship submission.

Note

Screenshots are not included in this documentation. The complete source code is available in the GitHub repository and can be executed using Android Studio.
